

SUREDROP

SECURE COLLABORATION, WITHOUT COMPROMISE.

“Now we can collaborate with absolute confidence. Simple, elegant and a joy to use. And secure beyond doubt.”

SUREDROP. SECURE COLLABORATION WITHOUT COMPROMISE.

THE SAFEST WAY TO COLLABORATE

You want the convenience of a file sync and share collaboration tool, but you can't compromise security. SureDrop is built using high-assurance encryption best practices, from leading encryption experts. There is no safer way to sync and share your files.

MAINTAIN CONTROL OVER DATA LOCATION AND JURISDICTION

Unlike most sync and share solutions, with SureDrop you always know where your data is being stored; so you can maintain 100% control over file location and jurisdiction.

IT'S THE DROP BOX SOLUTION YOU CAN USE, AND YOUR IT DEPARTMENT WILL LOVE.

With all the file sync and share tools and functionality your people have come to know and love, giving them 'anywhere', and with 'anyone', file collaboration, the difference between SureDrop, Dropbox and Box is the 'unbreakable' encryption security we deliver.

100% File control

With SureDrop, you have complete control over your files, which means you always know where your data is stored.

Maximum customer file security

State-of-the-art zero-touch encryption key management. Only your IT department has possession of and access to the encryption keys.

Standards-based encryption

AES 256bit standards-based encryption algorithms provide maximum data security.

Seamless management

The SureDrop client is remotely deployed using a silent install option and automatically updates as required without IT intervention.

A fully autonomous solution

SureDrop is fully self-governing and does not require external appliances to generate or distribute the encryption keys.

Highly resilient

SureDrop delivers the highest possible resilience to data network or device failure because it has designed-in fault tolerance and self-healing capabilities.

Compatible with desktop and mobile

SureDrop is enabled for both desktop and mobile devices, providing interoperability. Intuitive app and web functionality enable seamless file share and sync.

Effortless integration

SureDrop integrates seamlessly with your enterprise architecture, or that of your communications service provider.

Anti-Virus and DPL

SureDrop supports both anti-virus and data loss prevention (DLP) software APIs.

Unlimited file size

Unlike some synch and share applications, SureDrop places no limits on the size of file you can upload.

100% redundancy

SureDrop enables unlimited file copying. Whatever your policy for backup and recovery, it automatically copies files to the correct location.

SENETAS HIGH-ASSURANCE ENCRYPTION SECURITY EXPERTISE FOR ENTERPRISE AND GOVERNMENT

SENETAS IS A WORLD LEADER IN HIGH-ASSURANCE NETWORK DATA ENCRYPTION.

Our high-assurance network encryption solutions are certified by the world's leading independent testing authorities as suitable for Government and defence use.

That's why Senetas encryptors protect much of the world's most sensitive information; from government and defence data to commercial IP and transactional data in more than 35 countries.

Standards based encryption

SureDrop uses AES 256 bit keys: first, because it's a bigger number than 128 and bigger is better.

Second, it provides longer-term data protection.

Zero-touch encryption key management

Based on Senetas' secure client-side key management; SureDrop ensures the encryption keys stay with you and you alone.

Zero-touch key management makes end-to-end security effortless.

Fully featured

SureDrop's 'unbreakable' encryption security design does not compromise performance, nor ease of use.

Nor does it limit the functionality you'd expect from your file sync and share solution.

File fragmentation security

Whether your encryption files are stored on your premises or remotely using the SureDrop storage service, they benefit from additional file fragmentation protection.

FULLY FEATURED SECURE FILE SYNC AND SHARE

Everyone in your organisation enjoys the level of mobile collaboration, interaction and productivity they need, and without compromising your data security – it all happens behind 'unbreakable' encryption security.

Forensic super-user profile, above administrator role	✓	✗	✗

FLEXIBLE PAYMENT OPTIONS†

Unlike other file collaboration solutions, SureDrop offers a range of flexible payment options. Choose from \$ per active user per month, \$ per MB of data per month, or a combination of both.

Suredrop® offers the most flexible payment options in the market. Like all popular file sync and share products, SureDrop® is available on a monthly, \$ per-active user license fee basis. (For SureDrop® Premium customers, additional monthly storage fees apply.)

For enterprise or government deployments, payment based solely on a per-active-user basis may not be suitable. That's why we offer a choice of payment options; \$ per active user, \$ per MB of data used per month or a combination of both.

† Conditions apply. Prices are subject to change without notice.

* Excludes one-time costs that may be applicable.

** Minimum agreement term 1 year. Discounts apply for longer term agreements.

“Most important, aside from security, is the fact that we always know where our data is being stored”

SureDrop® is brought to you by Senetas Corporation Limited, a leading provider of certified, high-assurance encryption solutions to enterprises and governments in more than 40 countries.

Senetas encryption technology and hardware has protected much of the world's most sensitive data without compromising data network performance for 20 years. Our expertise is in protecting your data; whether it's being transmitted across high-speed data networks, stored in your data centre or up in the Cloud.

Our long established reputation in network data encryption, along with our long list of government and commercial customers, are the best assurance you could have that SureDrop® is the most secure file-sharing tool available.
